

Welcome to farmOTT, powered by Ittiam Media Labs

In this week's digest, we cover one of the unique media ingest capabilities that we offer in farmOTT, to import your personal content via a rapidly-growing file share service: Dropbox.

farmOTT Ingest capabilities

farmOTT is a cloud based transcoding solution equipped with a variety of ingestion options. Few to name are:

1. Web Upload.
2. Submit a CSV/XML file - Bulk Upload
2. Sync content from Amazon S3, Microsoft Azure Blob, Rackspace Cloud Files and [DropBox](#)

What is DropBox?

Dropbox is a file hosting service that offers cloud storage, file synchronization, and client software. Dropbox allows users to create a special folder on each of their computers, which Dropbox then synchronizes. Files placed in this folder also are accessible through a website and mobile device applications.

How to ingest videos from DropBox?

DropBox feature can be explored under Synchronize section of farmOTT. A publisher can add multiple DropBox accounts. To authenticate farmOTT DropBox app, farmOTT will redirect you to DropBox website where it will prompt user to grant permission. farmOTT DropBox App will then create a folder named farmOTT under Apps folder. All files present in farmOTT folder will then be synced on user initiation.

What are you waiting for?

Subscribe to farmOTT and ingest videos from DropBox. To Login, visit <https://transcode.farmott.com/farmott/> with user name and password provided to you.
