

Welcome to farmOTT, powered by Ittiam Media Labs

In this week's digest, we cover one of the unique media ingest capabilities that we offer in farmOTT, to synchronize your content from cloud storage.

farmOTT Ingest capabilities

farmOTT is a cloud based transcoding solution equipped with a variety of ingestion options. Few to name are:

1. Web Upload.
2. Submit a CSV/XML file - Bulk Upload.
2. Sync content from [Amazon S3](#), [Microsoft Azure Blob](#), [Rackspace Cloud Files](#) and [DropBox](#).

What are different Cloud Service Providers we support?

farmOTT makes ingestion of videos from Amazon S3, RackSpace CloudFiles and Microsoft Azure Blob simpler. Content stored in these cloud storage providers are synced on user initiation and then transcoded to various formats to support multiple devices. On each user initiation, only those videos which are newly added or modified will be ingested.

How to ingest videos from Cloud Storage in farmOTT?

Ingesting videos from cloud storage can be explored under Synchronize section of farmOTT. To ingest videos from Amazon S3, we would require you to add a bucket policy to your bucket. To ingest videos from Microsoft Azure Blob, publisher has to provide storage account and primary access key and for RackSpace Cloudfiles, the UserId and API Key. Sync Logs will help you to know about the status of your last Sync.

What are you waiting for?

Subscribe to farmOTT and ingest videos from Cloud Storage. To Login, visit <https://transcode.farmott.com/farmott/> with user name and password provided to you.

If you would like us to ingest videos from any other cloud storage, please do contact us.

For any further queries, send an email to support.farmott@ittiam.com
